## About This Game

### Purpose

Let's take photos by looking for Cryptid and aim to return safely.

### Encounter

The unknown creatures encountered on the map may be attacked before the player notices because the visual, auditory, and olfactory excellence and the sensing range is wide.

Let's get rid of body odor by shower first before leaving from your room and heading for exploration.  
After that, if you find an organism during exploration, let's take a picture as close as possible to avoid crouching.  
However, if it is too close, it will be noticed by the shutter sound of the camera this time.

### Gameplay

If there is a creature in the vicinity of the player, the sensor will emit a sound and inform the player himself. However, let's check visually the exact position.

Furthermore, if you use five installation sensors, you will find it easier to discover the shooting target.

Let's charge the camera when going out to explore.

If the battery runs out, the camera can not be used.

If you do not see the subject when shooting with the camera, or the view frame turns red if it is too far.

If the view frame turns green, it is judged that shooting succeeded.

However, if you are attacked after successful shooting, it will be judged that shooting failed, so please do not worry until you get

---

away from the creature.

When returning, you can return to the tent at the start point and return to the tent by interacting towards the tent.

Changing in your room when shooting succeeds and returning safely . . .

### **Map**

Various creatures and elements are scattered on the map.

In the feeling of loneliness, you may be able to discover something if you are exploring.

### **Future plans**

We plan to add more play contents and appearance organisms other than photography by future updates.

However, since it is production by one person, it may take time to update. I am pleased if you wait for the contents of the game to become fertile.
